

Jira Integration

Onboarding Guide

Altium 365's Jira Integration enables bidirectional data synchronization between Atlassian Jira® Issues and Altium 365 Workspace Tasks. This integration allows the remote creation of Jira Issues directly from your Altium 365 Workspace as dedicated Jira Tasks, or existing Jira Issues can be linked to a project in your Altium 365 Workspace.

Getting Started

ONBOARDING OBJECTIVES	RESOURCE
Activate your Altium 365 Workspace	 Documentation Article
Create a Jira Issue	 Documentation Article
Link to a Jira Issue	 Documentation Article
Jira tasks overview	 Documentation Article

Best Practices

- Establish a clear mapping of Jira Issue Types (e.g. stories, tasks, bugs) to Altium 365 collaboration entities like requirements, tasks, or comments.
- Define a naming convention or tagging system to link Jira Issues with specific tasks or comments in Altium 365, ensuring traceability across both environments.
- Align your Jira workflows with your Altium 365 processes by customizing statuses, transitions, and notifications.
